(54) CURABLE COMPOSITION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a curable composition suitable as a coating material having excellent adhesivity to a substrate of an eyeglass lens, etc., and having good stability even by storing in a one-pack state.

SOLUTION: The curable composition contains a photo-base generation compound e.g. an oxime derivative such as o-phenylacetylacetophenoxime and a carbamic acid derivative such as 2-oxy-1,2-diphenylethyl-N-cyclohexylcarbamate, a radically polymerizable monomer having epoxy group such as glycidyl methacrylate and a photochromic compound such as a chromene compound.
